Dictation

Use your voice to work faster, better and smarter

with SpeechExec Enterprise 7.0 and Dragon
Medical One Speech Recognition

Administrative work is adding to the daily workload of all medical professionals. Maintaining patient healthcare records, keeping notes and creating patient referrals takes up a lot of valuable time. Time, which especially doctors, could dedicate to their patients. Medical speech recognition can help ease this burden.

AI-powered speech recognition Dragon Medical One – has helped many doctors speed up their documentation process and make it more efficient. Combining speech recognition with a workflow software such as SpeechExec Enterprise, can not only save the doctors' time, but also that of the transcriptionists or assistants, as they need to spend less time on proofreading and clearing up any questions.

Philips SpeechExec Enterprise 7.0

- Medical speech recognition
- Dictate at cursor
- Classic dictation recorder
- Smartphone dictation
- Workflow in one solution

SpeechExec Enterprise 7 includes medical speech recognition and can support the following use cases:

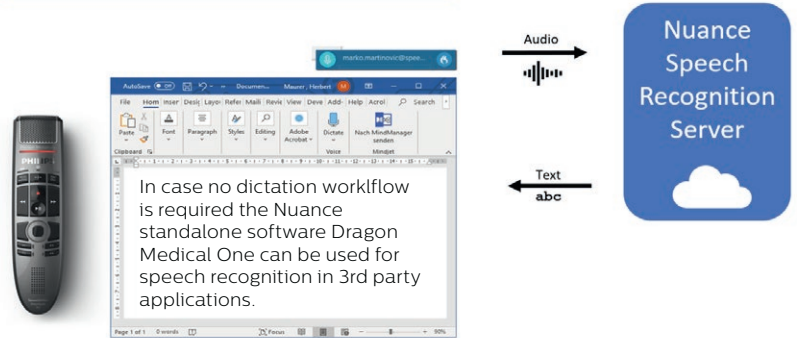

Dictate at cursor

Complete patient records across solutions and platforms with your voice five times faster than typing. Use your personalised Dragon medical profile from any location and any device. Even if you need to move frequently between different hospitals or clinics. You can use the same Dragon profile from any computer or laptop.

Using a secure desktop app (with an incredibly small footprint), you can use your voice to securely capture your patient's report more organically, efficiently and on your own terms. Dragon Medical One provides you with a consistent and personalised clinical documentation experience that spans across solutions, platforms, devices, and physical locations. For the organisation at large, the power of this cloud platform means easy access to data. These insights help monitor adoption trends, ensure user efficiency, help inform decisions, and reap the benefits of the compatibility of SpeechExec Enterprise workflow enhancements and the Nuance solution.

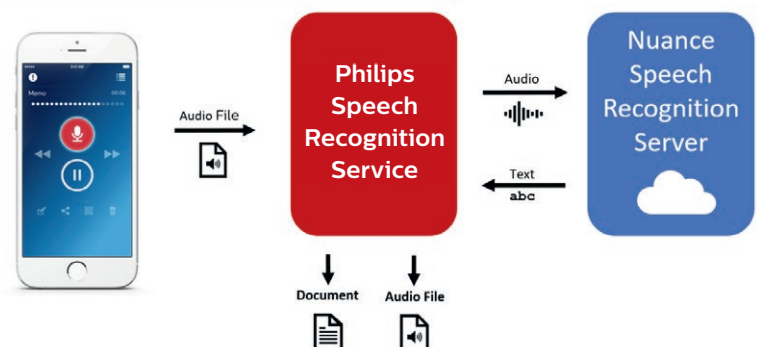

Dragon Medical One

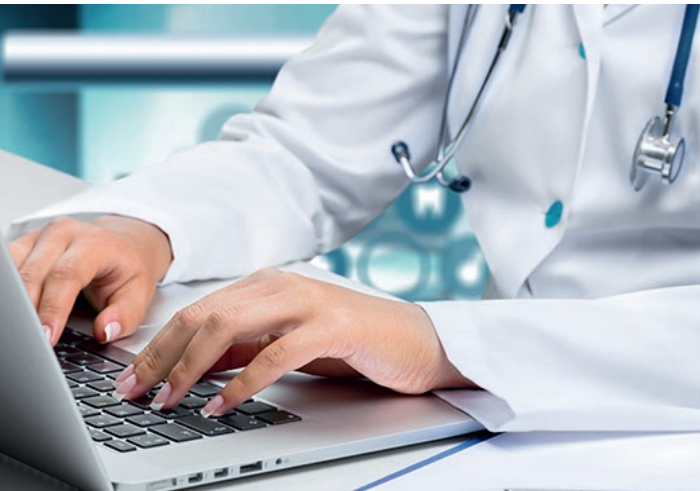

Dictate with your smartphone from anywhere

No matter where you are, in between clinics, offices or at home. SpeechExec Enterprise offers an easy to use smartphone app with the convenience to send your recording anytime, anywhere. The recording will be converted to text immediately and is available for correction. The document creation and documentation (filing, printing, saving) process can be handled via your inhouse PA/transcriptionist. The sound file is easily available to clarify certain passages if needed.

Philips SpeechExec Enterprise

Dictate with your portable recorder or microphone and let your trained staff finish the document and documentation

With an increased number of patients that must be consulted every day, it's important to save as much time as possible on admin tasks. This can be achieved with just dictating your consults and leave the rest to your transcriptionist and speech recognition. Your inhouse medical transcriptionist will save a lot of time by just proof reading and formatting the already speech recognised sound file instead of typing everything. SpeechExec Enterprise offers the possibility to review the sound file for parts, that have not been recognised correctly. No need to align with a doctor if parts of the transcribed documents are unclear. The transcriptionist can easily listen into the sound file themselves, either from home or in the practice and save you valuable time.
